

Malling™ Supreme

Pleasantly sweet Everbearer

Good flavour

Attractive glossy berries

Moderate disease resistance

Fruit quality

Malling™ Supreme has glossy and very attractive fruit berries, with good flesh firmness and shelf life. Pleasantly sweet, with a nice flavour and a mean Brix of 9.2°, the variety has a medium-large berry size, with mean berry weight of 21g.

Production period

Malling™ Supreme starts producing fruit at the end of May/beginning of June from spring-initiated flowers, with peak production at the end of July/beginning of August. During the production period Malling™ Supreme maintains consistent Brix levels of 9-10°.

Growth habit

Malling™ Supreme produces strong, robust plants with good vigour. It has simple trusses with good fruit display, providing for easy picking, and moderate runner production.

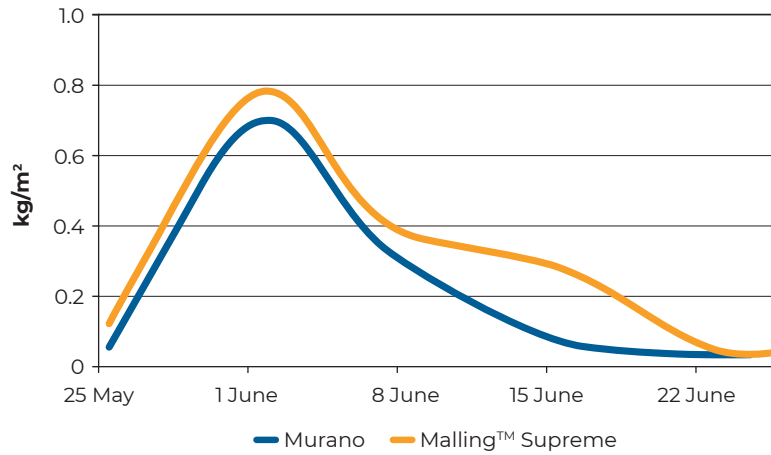

Disease resistance

The variety has good resistance to powdery mildew and moderate resistance to crown rot.
